Uday's experience

Industry - 14 years
PM Capital - 10 years

Team's experience (average)

Industry - 19 years
PM Capital - 11 years

Why invest in the Fund?

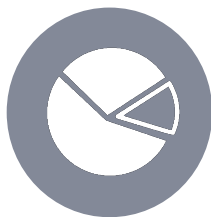

Opportunistic

The Fund aims to create long term wealth for our co-investors by finding and exploiting investment anomalies, wherever they are.

Deep experience

The Fund's active process has been shown to be effective, based on a philosophy developed by Paul Moore over 30 years. This has produced attractive long term capital growth.

Unrestricted

The concentration of the Australian equities market means many managers cannot add significant value. Our exposure to industry sectors or market capitalisation is unconstrained and benchmark unaware, determined solely by our conviction in the risk/ reward opportunities.

Global expertise and value add

While providing the best Australian-based opportunities, the Fund considers its investments in a global context. With access to PM Capital's effective international research, the Fund can invest 0-20% in companies internationally if they provide better risk/ reward propositions than are present domestically.

Co-investment

The management team have significant investments in the Fund – they invest for and with you.

"The Australian equity universe is relatively narrow. This suits our investment approach - we build a small portfolio of high conviction, differentiated ideas that we believe will provide better returns than the broader market."

Uday Cheruvu

Fund objective

To provide long term capital growth and outperform the greater of the S&P/ASX 200 Accumulation Index or the RBA cash rate over rolling seven year periods. The Fund is not intended to replicate the index.

This Fund is suited to investors seeking:

Capital growth

Provided by a demonstrated, focused, patient and considered process.

Access to Australian securities

Increase your exposure to Australian equities, either within your portfolio or SMSF.

A long term approach

Comfortable with investing in the Fund over the long term (7 years plus) with some short term volatility.

Diversity

The potential for returns that may be significantly different to those provided by the index and more traditional Australian equity funds.

Important Notice

This Report is issued by PM Capital Limited ABN 69 083 644 731 AFSL 230222 as responsible entity for the PM Capital Australian Companies Fund (ARSN 092 434 467, the 'Fund'). It contains summary information only to provide an insight into how we make our investment decisions. This information does not constitute advice or recommendations, and is subject to change without notice. It does not take into account the objectives, financial situation or needs of any investor which should be considered before investing. Investors should consider the risks, and a copy of the current Product Disclosure Statement which is available from us, and seek their own financial advice prior to investing. The PDS explains how the Fund's Net Asset Value is calculated. Past performance is not a reliable guide to future performance and the capital and income of any investment may go down as well as up due to various market forces. The investment objective is not a forecast, and is only an indication of what the investment strategy aims to achieve over the medium to long term. 1. Returns are calculated from exit price to exit price assuming the reinvestment of distributions for the period as stated and represent the combined income and capital return. The Index is the S&P/ASX 200 Accumulation Index, net dividends reinvested. See www.asx.com.au for further information on the Index.
