Fund commentary

- Rotation from growth and momentum to cyclical and value supports the portfolio's copper holdings
- We exit EML and Pact Group as they announce better than expected results

With COVID-19 vaccine rollouts accelerating and investors increasingly looking to a post-virus recovery there has been a clear shift to economically sensitive sectors.

Copper advanced 15% in February to close at levels not seen since 2011. Due to its linkage to industrial activity, copper is often viewed as a barometer for global growth. As investors increasingly look to commodities to benefit from an economic recovery there is growing recognition of the potential for material supply shortages in the copper market over the coming years. OZ Minerals remains one of the cleanest ways to play the positive copper story in the domestic market and is a core portfolio holding.

EML Payments' first half results were better than consensus estimates. The performance of the Gift & Incentive (G&I) business was a standout with revenues only declining 12% year-over-year despite COVID-19 impacting gift card issuance in the US and Europe. A strong revenue performance from the G&I business has a magnified impact at the EBIT level given it is EML's highest margin business. We exited the position after the result as the share price reached our valuation target.

Pact Group also performed strongly after the release of its results. As with EML we took advantage of the share price rise to exit the position.

Fund performance ^a (net of fees)	Inception Date	Exit Price (\$ cum)	1 Month	3 Months	6 Months	1 Year	3 Years pa	5 Years pa	7 Years pa	10 Years pa	Since Inception pa

PM Capital Limited, founded in 1998, is a globally-focussed fund manager that invests money on behalf of private clients, the clients of financial advisers and institutions. PM Capital's goal is to build long term wealth by investing in global markets with patience and conviction.

Investment philosophy

We aim to build long term wealth together with our co-investors by finding and exploiting investment anomalies. Using a focused, patient and considered approach to finding simple investment ideas produces the best environment for creating that long term wealth.

Our experience has shown us that while the market is largely efficient, it can, and regularly does, misprice a small proportion of companies. Our unique process is based on scanning the world for those companies (hence the radar in our logo), discovering the associated valuation anomalies and extracting value from them. We buy good businesses at a good price; businesses that we believe are being valued differently to their long term intrinsic value, but will return to their correct value over time.

Who manages the investment?

Kevin Bertoli and John Whelan are the Co-Portfolio Managers, who have over 28 years' combined industry experience and are supported by a team of investment analysts. The investment team is led by founder and CIO Paul Moore. We believe in being a patient investor, one that has conviction, one that finds opportunities where others can only see risk. We only invest in what we know, deeply, via our fundamental research.

Why the Australian Companies Fund?

Focused: The Fund's process has been shown to be effective, based on a philosophy developed by Paul Moore, over 34 years. This has produced attractive long term capital growth.

Unrestricted: The concentration of the Australian equities market means many managers cannot add significant value. We have an authentic investment process where our exposure to industry sectors or market capitalisation is determined solely by our conviction in the risk/ reward opportunities that we identify within portfolio guidelines. No conviction = no investment.

Opportunistic and focused: The Fund is not built around a general market benchmark or index - it is highly focused based on our fundamental, bottom-up investment process. As a guide, the Fund holds around 15 - 25 deeply researched stocks that we believe give the best opportunity to produce strong long term returns.

Global Expertise and value add:

Through this portfolio construction method used by the Fund directly benefits from PM Capital's global investment research that underlies the award winning PM Capital Global Companies Fund. This works in two ways - the Fund can invest up to 20% of the portfolio in international opportunities identified by the investment team. The Portfolio Manager can also take the market anomalies found globally and use the insights to identify similar opportunities in the Australian market.

Co-investment: Our co-investors receive access to a unique subset of opportunities which they may otherwise find difficult to access.

Outperformance: The Fund *has outperformed the relevant market index by 343% since inception.*¹ The Fund is managed from an Australian investor's perspective with consideration for tax and currency outcomes.

***Note:** Effective 1 December 2018 the payment of a performance fee was changed, becoming subject to the outperformance of both the RBA cash rate and the S&P/ASX 200 Accumulation Index.

Key Fund Details

Fund category

Australian equities

Investment style

Fundamental, bottom-up research intensive approach

The Fund may be appropriate for investors seeking capital appreciation over a seven plus year investment horizon

Important Notice

This Report is issued by PM Capital Limited ABN 69 083 644 731 AFSL 230222 as responsible entity for the PM Capital Australian Companies Fund (ARSN 092 434 467, the 'Fund'). It contains summary information only to provide an insight into how we make our investment decisions. This information does not constitute advice or recommendations, and is subject to change without notice. It does not take into account the objectives, financial situation or needs of any investor which should be considered before investing. Investors should consider a copy of the current Product Disclosure Statement which available from us, and seek their own financial advice prior to investing. The PDS explains how the Fund's Net Asset Value is calculated. Past performance is not a reliable guide to future performance and the capital and income of any investment may go down as well as up due to various market forces. The investment objective is not a forecast, and is only an indication of what the investment strategy aims to achieve over the medium to long term.

1. Returns are calculated from exit price to exit price assuming the reinvestment of distributions for the period as stated and represent the combined income and capital return. The Index is the S&P / ASX 200 Accumulation Index. See www.asx.com.au for further information on the Index.
