

ASIC's Regulatory Guide 97: Disclosing fees and costs on PDSs and periodic statements aim to provide investors with more transparency over the total costs of investing.

Regal Partners (RE) Limited, the issuer of the Funds listed below, has undertaken calculations to estimate each Funds' management (including indirect) costs, and also the total transactional and operational costs for 12-month period ended 31 March 2026.

The indirect costs of a Fund is the ratio of the management costs for each Fund that are not deducted directly from a product holder's account, to the total average net assets of the relevant Fund.

The calculations in this Statement are unaudited and reflect our current estimates and understanding, and reasonable interpretation, of the regulatory requirements. Changes to these estimated costs will be published on our website at [www.pmcapital.com.au](http://www.pmcapital.com.au).

The historical management and transaction costs (for the rolling 12 months) is estimated as follows:

- Numbers are rounded to two (2) decimal places.
- This is not a cost or fee accrued to PM Capital. This includes such things as interposed costs, and non-hedging derivative costs.
- This includes external interest expenses on stock borrowing on short selling securities and/or an overdraft or cash borrowings against which the Funds earn income and/or seeks to generate returns. This amount changes as the level of borrowings, and/or portfolio investments change.

\* Any investor buying or redeeming units incurs a cost, or "buy-sell spread". The purpose of the buy-sell spread is to ensure, as far as practicable, that any transactional and operational costs incurred as a result of an investor entering or leaving the Fund are borne by that investor, and not continuing investors.  
The buy-sell spread has been calculated based on our experience of the costs involved in trading these assets or the costs that the Fund has actually paid, and is reviewed periodically. This spread cost recovery amount is calculated by comparing the Application Price or Redemption Price (as appropriate) with the Net Asset Value Price multiplied by the number of units traded and summing this amount over the course of the year.

\*\* Where the buy-sell spread recovery exceeds the total transaction costs, the net transaction costs figure is disclosed as nil.
